

GREENHOUSE GAS EMISSIONS FROM **BREAD WASTE** IN NORWAY

Julie Christoffersen, Rishi Goel, Selma Thorland Gotaas and Julia Noppeney

80% of Norwegians eat bread everyday and each of us throws **9.3 loaves** every year, therefore it is our aim to explore the impacts of food waste - through bread waste - on climate change.

WHY DOES THIS MATTER?

- Food waste is the biggest contributor to climate change
- 1/3 of all food produced is wasted
- Agriculture is the largest threat to biodiversity

IMPACTS TO **OTHER SDGs**

WHAT CAN **BUSINESSES** DO?

- Use more advanced sales models to bake the right amount of bread
- Reducing storage temperature
- Selling half loaves of bread

WHAT CAN **YOU** DO?

- Use bread boxes
- Freeze your bread

EDUCATION ALSO PLAYS A MAJOR ROLE IN FOOD WASTE. TO LEARN MORE, READ OUR PAPER HERE
