Guys, seen the new evolution update?

Kirsti Thelin

1 Evolution 2.0
3,36 GB

Evolution 2.0 represents a **groundbreaking** leap in human evolution by introducing precise, pre-birth genetic editing. Thanks to cutting-edge biotechnology, prospective parents can now modify specific traits in their children even before they are born.

This advancement is made possible through **CRISPR-Cas9 technology**, a revolutionary gene-editing tool. CRISPR acts like molecular scissors, allowing scientists to cut DNA at specific locations and insert or remove genetic material with unprecedented accuracy. This technology enables the correction of genetic diseases, the enhancement of desired physical or cognitive traits, and the prevention of inherited health conditions.

Through a simple and intuitive interface, parents can now make choices about traits such as:

- Resistance to genetic diseases
- Physical features (e.g., freckles, eye color)
- Cognitive abilities (e.g., memory, intelligence)
- Longevity and overall health resilience

The future of evolution is no longer random — it is a choice.

Update Tonight

Marie Strand Nilsen

Yeah, I was thinking black hair with green eyes like grandma for mine <3

Susanne Sætersdal Hole

Ooo yes, without gluten intolerance :)

Christine Soland

Details

Terms and Conditions

By proceeding with the Evolution 2.0 update, you acknowledge and accept the following **ethical dilemmas**:

- You remove the unborn child's right to genetic autonomy
- There is a possibility of unintended genetic consequences, including unforeseen health issues
- Picking traits don't always guarantee the wanted result
- You may be contributing to less genetic diversity
- You give up your child's right to question or undo these changes later
- This technology could increase unfair differences between people
- You recognize the possibility of psychological impact on the child due to preselected traits
- These changes are permanent

By pressing "Agree" you accept all risks and responsibilities linked to using Evolution 2.0.
